Reports and dashboards AutoCAD comes with the reporting software Business and Installation Manager. BIM provides a complete interface for business. The installation manager provides support for and sets up the graphical desktop and database for reporting and monitoring tools. Views A 3D view is typically represented

using 2D icons or 2D text. The view manager has a mechanism for moving the 3D view inside the drawing; this is achieved by snapping the view to one or more drawing elements. The view manager also contains a number of tools for changing the view. These include orthographic views, top-down views, and views that show the current selection or editing entities. The view manager can be used to view a single 2D view, a collection of 2D views, or one of the 3D views. The View Manager has many tools such as: Show selection Show entity properties Show entities selected Snap tool Duplicate tool Perspective views Zoom tool Drop tool If the current active object is a 2D view, this can be shown in the status bar. Document properties An AutoCAD drawing contains the properties of the document which can be accessed via the Document Properties dialog box. Title and Text The Document Properties dialog box allows adjusting the title, the text properties (Font, Font style, font color and format), the insertion, spacing and justification of text in the drawing. Drawing Sets Drawing Sets are a way to organize the drawing parts needed to create a drawing. The drawing parts are normally used to produce separate objects. A drawing set can be used as a drop-in replacement for the standard drawing, it can contain additional drawings or parts to a drawing. The most common use for a drawing set is to contain the parts needed to create a particular view or drawing. However, a drawing set can contain drawings or parts for any AutoCAD entity. Other utilities The application also has several utilities included as standard. These include but are not limited to: Workspace Component Manager Database Manager Object Manager Database Refresh GIS Manager LISP script editor Reference manager History Manager User Forms Database Engine Drawing View Manager Message Center Word Editor AutoCAD also has many third-party utilities and plug-ins, and an Application Programming Interface (API) which allows the creation of plug-ins for AutoCAD: C# plug-ins C ca3bfb1094

NOTE: You can also run DWG2PDF in the command line by using the command: "c:\Program Files\Autodesk\DWG2PDF.exe". Q: Does any-to-many relationship reduce the underlying table size? Let's consider the following schema. table one (id, date, key) table two (id, date, key) table many-to-many (id, tableone_id, tabletwo_id) Suppose table two has a million rows, and table one has another million rows. Let's say that there are only 3 keys in total (we don't care about duplicates). This will be stored in the table many-to-many as: insert into many-to-many (tableone_id, tabletwo_id) select 1, 1 insert into many-to-many (tableone_id, tabletwo_id) select 1, 2 insert into many-to-many (tableone_id, tabletwo_id) select 1, 3 insert into many-to-many (tableone_id, tabletwo_id) select 2, 1 insert into many-to-many (tableone_id, tabletwo_id) select 2, 2 insert into many-to-many (tableone_id, tabletwo_id) select 2, 3 insert into many-to-many (tableone_id, tabletwo_id) select 3, 1 insert into many-to-many (tableone_id, tabletwo_id) select 3, 2 insert into many-to-many (tableone_id, tabletwo_id) select 3, 3 (Note:
