AutoCAD X64

C++ AutoCAD's native C++ interface is available in two versions: one targeting Windows and Unix/Linux, and one targeting Microsoft.NET. The C++ interface is a powerful and flexible toolkit for rapid application development. Several IDEs support the

development of AutoCAD extensions with C++. Pascal/Free Pascal The original AutoCAD-LISP, or "AutoCAD Extended Language," or "AECL", was based on the AutoCAD's native LISP, or "Extended Language for Programming AutoCAD." AECL-LISP was a cross-platform, open-source LISP-like language, which was based on the autoLisp system (modified by AutoLISP). Another implementation of AutoCAD's LISP was available in the open source freepascal.org

development environment, version 2.2.2. Freepascal-LISP, or "FLISP", was a special implementation of the original LISP language used to create extensions for AutoCAD. Many features of AutoCAD have been implemented in FLISP. In AutoCAD LT, a simplified LISP-like language called "AEL" was introduced. Many products and applications are available that support FLISP, such as BRLT, IAFL, DrawFLISP, EffFLISP, and AvLisp. FLISP is based on Free Pascal 2.2.2. Freepascal-LISP is compatible with the core lisp

features and basic AutoCAD features, such as: Subroutine definitions. Function definitions. Local variables. All statements and statements groups of the AutoLISP language are supported. Comments are not allowed. Undefined symbols (i.e. symbols that were not declared by the programmer but that are not recognized by the compiler) are not allowed. The symbols that are not allowed are shown as "XXX+Not_a_Real_symbol" or "XXX+Not_a_Real_symbol#XXX"

in the errors window. AECL and FLISP were declared deprecated by Autodesk in AutoCAD 2009, and were removed in AutoCAD 2010. Visual LISP Visual LISP, or "VLISP" for ca3bfb1094
